Re: AI Product Manager & Senior Product Owner Opportunities

Dear Hiring Team,

I am reaching out to introduce myself for AI Product Manager and Senior Product Owner opportunities within forward-thinking technology organizations. With 11+ years of progressive technology experience spanning enterprise agentic AI platforms, deep customer discovery, and 0-to-1 startup leadership, I specialize in bridging the critical gap between emerging LLM capabilities and commercially successful, high-adoption enterprise software. Whether directing multi-pod engineering teams or personally building production-grade voice and RAG pipelines, my focus is consistently centered on customer-grounded execution and measurable business ROI.

In my role as Product Owner and Project Manager at AltaDX, I steer the product definition, GTM alignment, and continuous delivery of OMAP® (Outcomes Micro Agents Platform). Over my tenure, I expanded the platform from an initial Concierge Agent into a commercial suite of 11+ autonomous digital agents—including Collections, Sales, Receptionist, Feedback, and Yield Agents—while actively driving the ongoing BYOA (Build Your Own Agent) initiative. To ensure our digital hires solve genuine operational bottlenecks, I lead direct customer discovery interviews and tight feedback loops with club operators, translating operational friction into high-value product capabilities shipped across all agents every sprint cycle. Orchestrating 4 delivery pods and a 25+ person multidisciplinary team (BAs, QA, tech leads, AI/ML engineers, data engineering, RPA), I instituted structured code freezes and disciplined sprint governance that significantly enhanced release predictability, earning a Q3 2026 Leadership Award and two Team Excellence Awards.

Complementing my enterprise product ownership is my proven execution as a startup founder. I conceived, architected, and shipped Round1 (round1.in), an AI voice-interview screening platform that has processed 153+ completed client interviews for enterprise staffing firms. Solving real customer pain required deep AI product thinking: I established rigorous 80/20 scoring contracts, minimum-answer gates, and suspicion caps that prevent unfair automated penalization, while migrating audio processing to server-side Deepgram streaming to ensure mobile and Safari reliability. Across independent AI builds such as Chirppy (a real estate lead assistant with brochure-grounded RAG) and Ask Mandy (voice mock interviews), I continuously test prompt architectures, anti-hallucination guardrails, and rapid MVP commercialization.

My credential as an AWS Certified AI Business Strategist, combined with my Salesforce Certified AI Associate, Certified ScrumMaster (CSM®), and SAFe® 6 POPM certifications, reinforces my commitment to marrying strategic AI vision with disciplined Agile execution. I bring a rare blend of customer empathy, multi-pod engineering orchestration, and technical fluency that enables me to partner seamlessly with engineers, executive leadership, and customers alike.

I am eager to bring this combination of hands-on agentic AI experience, customer discovery rigor, and delivery leadership to a product organization committed to delivering exceptional customer value through intelligent technology. I would welcome the opportunity to connect and discuss how my background and skill set can drive immediate, high-impact results for your product roadmap.

Sincerely,

Kandarp Mathur
AI Product Manager | Senior Product Owner | Founder
